## New tool head Tz-P20-Pu20

**High performance cutting and punching tool head whenever fast cutting and drilling of holes are requested**

This new tool head consists of 1 Z-axis controlled tangential module, 2 rotating punch spindles as well as 1 pen module. The material clearance of each tool position is 20 mm and it can achieve a punch frequency up to 10 holes/sec.

To obtain the maximal leather yield – a real demand from the footwear industry – was the main reason for the development of this new tool head. The combination of high precision mechanics with the latest technology of pneumatic elements and servo

motors enables us to achieve this outstanding performance.

This tool head can be connected to every Zünd cutting system from the PN-line and requests external air pressure.

### Feature / specification

punch frequency	up to 10 holes/sec
weight	5kg

requested air pressure	min. 6bar
air consumption	120l/min
